

Delivering more effective...

...business communications

Whitepack
Network
Services Ltd

Whitepack Network Services

Founded in 1997, Whitepack Network Services is a leading provider of innovative and reliable business IT infrastructures that meet the voice and data requirements of organisations of every size across the UK and Europe. We understand the critical role that efficient structured cabling systems play in successful organisations and strive to exceed customer expectations for every deployment.

Our clients include well-known organisations in many different markets including:

- Financial
- Retail
- Utilities
- Technology
- Manufacturing
- Government
- Health

We have a proven track record of installing reliable, high speed IT infrastructures in mission critical environments on time and within budget. What is more, we can ensure that networks have the required level of resilience to enable organisations to comply with the latest corporate governance guidelines.

Whitepack Network Services provides a comprehensive range of tailored IT infrastructure services such as:

- equipment moves and configuration changes
- complete structured cabling deployments across single or multiple sites
- complete project rollouts.

Our system design expertise ensures that networks are future-proofed, enabling emerging technologies and bandwidth intensive applications such as video and multimedia to be easily integrated.

Using the latest test equipment our engineers can ensure the operational status of every system and results can be electronically provided to clients upon completion of projects. Whitepack Network Services ensures that all installations are fully compliant with the latest industry standards committees such as TIA/EIA & ISO 11801.

An Expert Resource

Whitepack Network Services has offices in London, Hertfordshire, Somerset and Wales, with engineers strategically located nationwide. This enables us to provide a fully managed national service on a local basis whilst consistently delivering the highest quality standards of work.

An experienced project team is assigned to every deployment with responsibility for organising all resources and liaising with clients, keeping them fully informed of progress from start to finish and ensuring that target milestones are met.

Our engineers undertake regular training programmes, conducted by the leading manufacturers, to maintain their knowledge and skills.

Structured Cabling

Whitepack Network Services only partners with best of breed suppliers with proven track records of performance and durability. We hold key accreditations with ADC Krone, Excel, Siemon, Brand Rex and Amp Netconnect. Through our approved partner companies, we can offer Ortronics, Systemax, Molex, Panduit and R&M.

This allows us to provide high performance voice and data network infrastructures to meet the requirements of all budgets, utilising a variety of technologies including high performance structured cabling systems such as Category 6 and the emerging 10 Gigabit. We offer a comprehensive warranty of up to twenty-five years on such systems.

Whitepack Network Services also specialises in fibre optic deployments including OM1, OM2 and OM3 multimode cables, and long haul OS1 & OS2 single mode cables along with all termination types.

Wireless Solutions

To meet the increasing need for mobility, Whitepack Network Services provides a range of scalable wireless solutions, either stand-alone or integrated with conventional wired networks, with all the security features required to prevent unauthorised access.

Using the IEEE 802.11g standard for wireless infrastructures, speeds of up to 56MBits/sec can be achieved enabling all standard commercial applications such as file sharing, printer sharing, email and Voice over IP (VOIP) to be deployed. Whitepack Network Services also offers laser point-to-point solutions with connection speeds of up to 1Gbit/sec, providing a faster and cheaper alternative to conventional leased line solutions.

Whitepack Network Services has the expertise to quickly and cost-effectively deploy wireless networks, complete with all necessary access points, and integrate them with existing wired networks without disruption to the working environment.

Moves, Adds & Changes

Whitepack Network Services provides a comprehensive support service and responds rapidly to all requests for assistance with office relocations, personnel moves or equipment changes.

An experienced relocation team is assigned to ensure that all aspects of the move are identified. A detailed project plan is prepared to ensure that all the required services are in place, including all necessary voice and data outlets, prior to the desk move. This is usually completed outside normal office hours.

Infrastructure Health Check

Whitepack Network Services offers a comprehensive health check service for existing IT infrastructures. After checking the operational status of all voice and data cabling, we provide a full report detailing the status of your infrastructure. It identifies areas of your existing network infrastructure that are not meeting current demands and recommends suitable solutions that will improve performance and allow for future expansion.

We can offer you a free quotation for the health check and, following our report on the status of your network infrastructure, can provide a quotation for any network or cabling improvements that may be required.
